

Limited Visual Dam Safety Inspection Summary Report

MA-088

HC&S Reservoir 84

Maui, Hawaii

Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

Dam ID:	MA-088	_
Namo	Reservoir 84	
Naille	IVESCIACII O d	_

Limited Visual Dam Safety Inspection Conducted on: 04 April 2006	
--	--

I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

Dam ID:	MA-088
Name:	Reservoir 84

IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

V. Inspection Team

<u>Organization</u> <u>Name / Title</u>
Corps of Engineers John Dillon, P.E.

Geotechnical Engineer

State of Hawaii, Dept. of Land and Natural Resources Curtis Powers

Engineering Division

VI. Owner's Representatives Present

Hawaiian Commercial & Sugar Company, a Division of Alexander and Baldwin, Inc.

Clyde Anakalea Alexander Davis

VII. Summary Report Team

OrganizationNameCorps of EngineersDerek ChowBill Empson

State of Hawaii, Dept. of Land and Natural Resources Denise Manuel

Edwin Matsuda

VIII. Dam Type

The dam appeared to be an earthen embankment dam.

Dam ID:	MA-088
Name:	Reservoir 84

IX. Dam Classification

The current hazard classification of this dam is: High

Hazard Potential Classification based on the following:

Category	Loss of Life	Economic Loss
Low	None Expected	Minimal (undeveloped to
		occasional structures
		or agriculture)
Significant	Few (No Urban development and no more than a small number of inhabitable structures)	Appreciable (Notable agriculture, industry or structures)
High	More than a few	Extensive community, industry or agriculture.

Based on inventoried storage and height data, the size classification of the dam is: Small

Size Classification based on the following:

Category	Storage (Acre-Feet)	Height (feet)
Small	< 1000	< 40
Intermediate	> 1000 and < 50,000	> 40 and < 100
Large	> 50,000	> 100

X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

Satisfactory Expected to fulfill intended function.

Fair Expected to fulfill intended function, but maintenance is

recommended.

Poor May not fulfill intended function; maintenance or repairs are

necessary.

Unsatisfactory Is not expected to fulfill intended function; repair, replacement, or

modification is necessary.

Unknown Not visible, not accessible, not inspected, or unable to determine

the condition rating based on the observation taken.

Dam ID:	MA-088
Name:	Reservoir 84

A. General appearance:

The dam was a 27' tall earthen embankment used for irrigation purposes. Trees and tall vegetation cover the upstream and downstream slopes. Isolated erosion and some seepage were observed on the downstream side.

Modifications / Improvements: None noted.

Based on staff personnel, this reservoir has not had a dam safety incident.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An EAP is required for High Hazard Dams. Submit an updated EAP for this facility.
- c. Routine inspection logs were not inspected.
- d. Dam owners shall provide for routine inspection of the dam.
- e. The dam did not appear to be maintained on a regular basis.
- f. Access to site appears to be satisfactory.
- g. Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- h. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- i. Power / Communication: There were no communication systems observed on this reservoir.

B. Access / Security:

Access to the dam was accomplished via a County roadway. Access requires a 4-wheel drive vehicle.

Security issues: Not noted.

C. Intake Works: (Satisfactory)

There are 2 of inlets feeding the reservoir. These are a 3ft by 3ft concrete lined flume and a 10 ft by 10 ft soil lined flume.

The intake or inlets have the ability to be shut off or diverted away from the reservoir during periods of heavy rains. This is done manually with a gate.

Findings and Corrective Actions:

- a. The intake works were not tested.
- b. The intake works appeared to be in satisfactory condition, no corrective actions are required at this time.

Dam ID:	MA-088	
Name:	Reservoir 84	_

D. Reservoir: (Satisfactory)

The reservoir level during the inspection was 12 feet.

A wooden staff gage was observed

According to staff personnel, the reservoir is normally operated between the range of 6' and 14'.

Sinkholes or depressions were not observed.

Findings and Corrective Actions:

a. The reservoir appeared to be in satisfactory condition, no corrective actions are required at this time.

E. Upstream Slope: (Fair)

The upstream slope was a 1 on 1.5 slope.

Erosion was not visible; the slope was not entirely visible.

Cracks were not visible; the slope was not entirely visible.

Sinkholes were not visible; the slope was not entirely visible.

The upstream slope was not entirely visible due to heavy grass, bushes and trees.

Findings and Corrective Actions:

- a. The upstream slope appeared to be in fair to poor condition and requires corrective action.
- b. The upstream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- c. Tree(s) were observed on the dam embankment. Trees have been identified as the probably cause of piping failures, and can possibly cause sever damage to the embankment if they are uprooted during a high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

F. Crest: (Satisfactory)

The dam crest was approximately 20 feet wide.

There was a dirt access road on top of the crest, which appeared to be well utilized. Cracks were not observed.

Sinkholes were not observed.

Findings and Corrective Actions:

- a. The dam crest appeared to be in satisfactory condition and requires no corrective action.
- b. Access along the crest was satisfactory.

Dam ID:	MA-088	
Name:	Reservoir 84	_

G. Downstream Slope: (Fair)

The downstream slope was in fair to poor condition and not visible due to heavy vegetation. The slope was very steep, around a 1 on 1.5 slope.

There was access to the downstream slope via a roadway along the downstream toe

There was no slope protection observed on the downstream slope.

Erosion was noted in a large gully about 3' wide near the crest. The slope was not entirely visible due to vegetation.

Sinkholes were not visible on the downstream slope, however the slope was not entirely visible due to vegetation.

Tall grass, bushes and trees were observed on the downstream slope.

Seepage of about 1-gpm was visible coming out from the bottom of concrete ditch at the toe.

Findings and Corrective Actions:

- a. The downstream slope appeared to be in fair to poor condition and requires corrective action.
- b. The down stream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- c. Tree(s) were observed on the downstream slope. Trees have been identified as the probably cause of piping failures, and can possibly cause sever damage to the embankment if they are uprooted during a high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.
- d. Rut and/or Gully erosion was observed on the slope, which requires maintenance and/or repair. Description: Fill gully with compacted fill
- e. Seepage/Ponding water was observed. Monitor and conduct further investigation to locate the source of water and extent of any possible hazardous or developing condition.
- f. The slope was very steep, around a 1 to 1 slope; further study is required to verify slope stability.

H. Abutments / Toe: (NO ABUTMENT, Toe discussed under downstream slope)

I. Outlet Works: (Fair)

The outlet works appeared to be a one 24" steel pipe.

Not inspected in detail, not tested.

The outlet works was controlled via a valve on the downstream side of the dam.

Seepage was not visible flowing near the exit of the outlet works from the dam.

Findings and Corrective Actions:

a. The outlet works were not tested.

Dam ID:	MA-088	
Name:	Reservoir 84	

- b. The outlet works appeared to be in fair to poor condition, corrective actions are required at this time.
- c. Remove woody vegetation and roots near outlet.

J. Spillway: (Fair)

This spillway consisted of a 2.5ft by 3ft concrete box conduit.

The spillway approach was clear.

There was no erosion observed near the spillway.

Further investigations should be conducted to conclude the capacity of the spillway.

Findings and Corrective Actions:

- a. The Spillway appeared to be in fair to poor condition and requires corrective action.
- b. Unclear if spillway is adequately sized. Spillway should pass the probable maximum flood. Verify spillway capacity and take corrective action as required.

K. Down Stream Channel: (Fair)

The down stream channel was not investigated.

There is a well-defined downstream channel.

Findings and Corrective Actions:

- a. The downstream channel was not inspected.
- b. The downstream channel appeared to be in fair to poor condition and requires corrective action.

XI. Additional Comments:

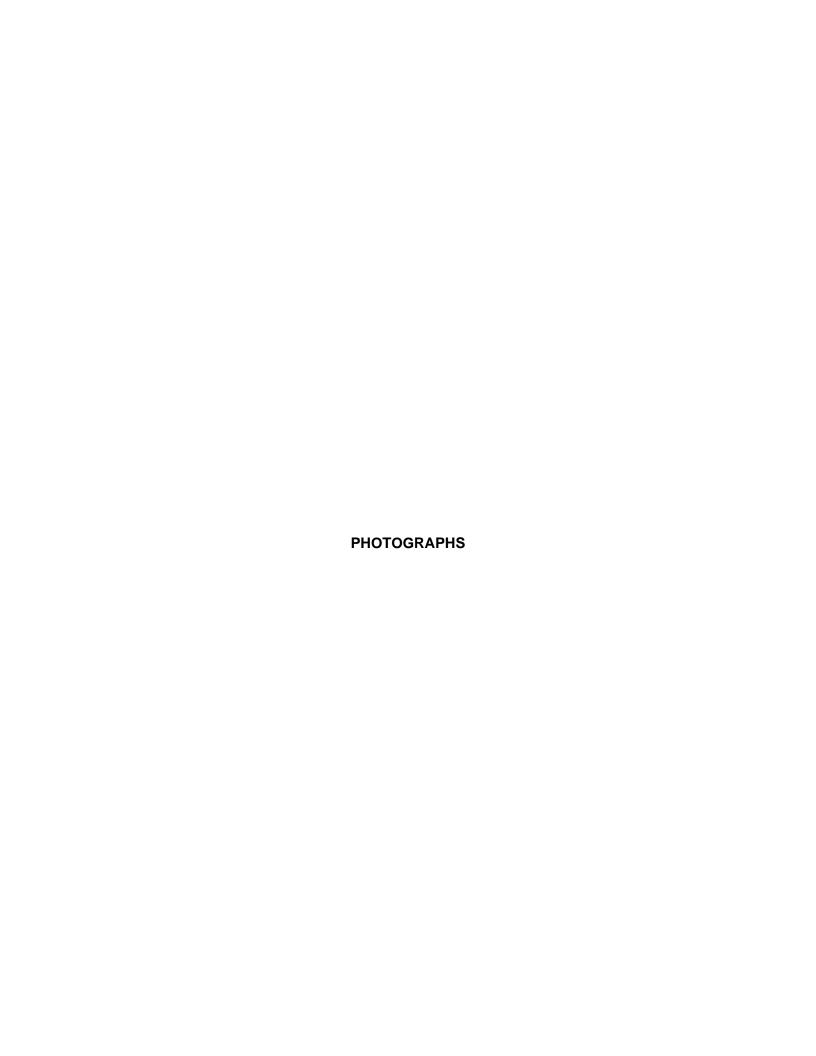

No immediate dam safety threats.

Woody vegetation and roots should be removed from dam.

Fix erosion gully on D/S slope

Monitor seepage at downstream toe. Difficult to determine if flow is coming from reservoir or pump area just downstream of toe.

Daily management of water levels is required to allow for safe operation of dam

Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
